DRIFT AI

AUGUST WETTERAU

4/14/26

WHAT IS DRIFT?

- Drift is an app that uses conversational AI to put users into professional situations to improve their speech
- After every scenario, the transcript will be sent to an external AI service
- Score the user’s responses through text and vocal tone
- Give specific tips so the user knows what to focus on improving
- Most people don’t know how they’d be until they experience a situation
- Practice real conversations in a low-pressure environment

PROJECT GOALS

- Help users improve communication skills, specifically in professional settings
- Real professional scenarios are simulated
- Analyze transcript and vocal tone to provide meaningful feedback
- Track improvements over time

PROJECT JUSTIFICATION

- Both generative AI and mobile development are extremely interesting to me
- I have a huge passion for mobile development
- Making an app using React Native would be a great learning experience
- Working with AI is something I should get comfortable with
- I have been in situations like these and realized I totally botched it
- An app like this would help me personally and many other people

PROJECT CHALLENGES

- HUME EVI 3 costs money every minute
- Issues getting the conversation id
  - Hard to retrieve transcript automatically
- Testing conversations is limited due to free usage
- Prompt engineering

STATUS UPDATE

Accomplishments

- UI fully built
- Supabase database setup
- Can connect to HUME with scenario
- Generate score from a chat from history

Next Steps

- Automatically generate score from conversation
- Add chat history
- Add more scenarios

User Testing

- Tested UI flow
- Verified backend data sync (Read/write)
- Verified HUME connectivity
- Added Gemini support for scoring

Help Needed

- As of now I do not need any help

THANK YOU
